Overview

- Background
- What options have we and what works?
- Evidence of benefits?

Transversus Abdominis Plane block (TAP)

PECS block

Quadratus Lumborum block (QL)

Erector Spinae Plane block (ESP)

.... what's current

Issues with IFP blocks

Conclusion

Hesham Elsharkawy, M.D., M.B.A., M.Sc., Kariem El-Boghdadly, M.B.B.S., B.Sc., F.R.C.A., E.D.R.A., M.Sc., Michael Barrington, Ph.D., M.B.B.S., F.A.N.Z.C.A.

- Analgesic option for abdominal procedures
- Initially described approaches;

Blanco Block 2007

Similarities with Rafi's TAP block 2001

? Posterior TAP

 Change in nomenclature based on site of injection relative to QL musculature

QL1, QL2, QL3 to

Lateral

Posterior

Anterior

Update on QL block

Quadratus Lumborum Block

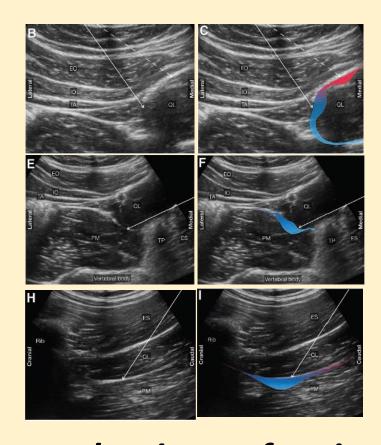

Anatomical Concepts, Mechanisms, and Techniques

Hesham Elsharkawy, M.D., M.B.A., M.Sc., Kariem El-Boghdadly, M.B.B.S., B.Sc., F.R.C.A., E.D.R.A., M.Sc., Michael Barrington, Ph.D., M.B.B.S., F.A.N.Z.C.A.

Approaches;

- Lateral QL (QL1)
- Posterior QL (QL2)
- Anterior QL (TmQL/QL3)

Anterior Subcostal

...Each *may have* different *mechanisms of action*...

Hypothesized Mechanism of Action.. Summary

Endothoracic Fascia Pathway

Spread to PVB were 'regularly' found with Anterior QLB Dam 2017, Elsharkawi 2017

'.. LA injected between Transversalis fascia and the QL muscle MAY spread to the TPVB space

.... the vertebral *level of injection will influence the extent* of cranial spread...'

Hypothesized Mechanism of Action.. Summary

Lumbar Spinal nerve roots and branches

Direct **spread to lumbar plexus** origins Carline 2016, Adhikary 2017, Sondekoppam

Mostly seen with Anterior QL

Peripheral nerve/sympathetic field

Lateral *spread to TAP plane* for *Lateral and Posterior QL*Carline 2016

Neuro-circulatory vasomotor changes to nociceptors and mechanoreceptors of Thoracolumbar Fascia

From RCTs...

Up to 1.5 to 4 fold reduction in opioid consumption... VAS scores at various time points up to 48h

Reduction by half of rescue analgesia requirements...

From Case reports...

Various abdominal surgical, gynaecological, urological procedures and *hip to lower limb procedures* ... from *T7-L2 dermatomes* (1 reported case of TRAM flap for breast reconstruction)

Reported incidences of **motor block and weakness** after **ALL QL** approaches. Wikner 2017 Ueshima 2018

Hypotension Cardoso 2017

LAST not reported so far (reported peak lower than in TAP block)

Murouchi 2015

No evidence for stratification of risk of bleeding; recommended to **follow ASRA guidelines for deep peripheral blocks** for ALL QL approaches.

Weak evidence base but still growing...

Transversus Abdominis Plane Block versus Quadratus Lumborum Block for Postoperative Pain in Abdominal Surgery: A Systematic Review and Meta-analysis

Utsav Malla¹, Nathan Murray¹, Ruan Vlok^{2, 3}, Thomas Melhuish^{4, 5}, Willem Basson¹, Leigh White^{1, 6*}

Archives of Anesthesiology and Critical Care (Autumn 2018); 4(4): 542-546

5 Databases All study designs up to May 2018 QL v TAP in abdominal surgery

Primary Outcome;

Post-operative pain

Secondary Outcome;

Time to rescue
Adverse effects
Morphine consumption

Transversus Abdominis Plane Block versus Quadratus Lumborum Block for Postoperative Pain in Abdominal Surgery: A Systematic Review and Meta-analysis

2 HQ + 1 LQ studies

No SS difference in **time to breakthrough analgesia** with **QL** block 459.69 min (-85.33 to 1004.71; I_{2} = 100%; p=0.10)

Transversus Abdominis Plane Block versus Quadratus Lumborum Block for Postoperative Pain in Abdominal Surgery: A Systematic Review and Meta-analysis

Utsav Malla¹, Nathan Murray¹, Ruan Vlok^{2, 3}, Thomas Melhuish^{4, 5}, Willem Basson¹, Leigh White^{1, 6*}

Archives of Anesthesiology and Critical Care (Autumn 2018); 4(4): 542-546

2 HQ studies

SS reduction in 24h morphine consumption 13.63 mg; (1.48 to 25.78); I2= 98%; p = 0.03)

No Adverse effects recorded in 3 of 4

1 study **improved satisfaction** with QL

Transversus Abdominis Plane Block versus Quadratus Lumborum Block for Postoperative Pain in Abdominal Surgery: A Systematic Review and Meta-analysis

Utsav Malla¹, Nathan Murray¹, Ruan Vlok^{2, 3}, Thomas Melhuish^{4, 5}, Willem Basson¹, Leigh White^{1, 6*}

1st Meta-analysis; QL v TAP for abdominal surgery Common to all 4 studies:

All 3 parameters favour QL, but only 2 were statistically significant
Pain scores beyond 2 h Not SS different
but being lower AT ALL time points
High heterogeneity (>94%)

Conclusion...

... QL better analgesic profile...

... No increase in adverse events rates...

... *interpret with caution*.. small, heterogenous surgical population and age groups...
